

To Whom it may concern

After reading both sides of the BPL ,I agree that broadband is great,but, what's wrong with what we have now. Having 2 independent systems would benefit in many ways, for ex. if we loose powerlines , we loose internet connections ,lt may not bother the people who don't have power,but it would surely upset others that did.Also, being a Ham Radio Operator and knowing the interference this will cause is my and many other's concern .By using this BpL You will not only interfere with ham radio, you'll also interfere with our only other means of Emergency communications, with all of these terroristic threats,etc.. you're going to shoot us in the foot for money! Do common sense and logic not apply here.

You may actually loose more money,simply put, with all of this noise on the bands,no one is gonna want to go on, so licenses expire ,testing dwindles to a halt, and so does the Money.

So to make it simple You start using BpL Not only will you wipe out ham radio, you may also be screwing the whole country at the same time,but, cutting our backup system.

I thank you for your time and hope you will Keep this in consideration.
